Dear Mr. Fowles:

Summaries of the 1983-1993 gypsy moth trapping programs conducted at each of five Army Corps of Engineers sites within the Pittsburgh District are enclosed for your information (Table 1). Also enclosed are maps showing trap locations (Figures 1-5). The purpose of the trapping program is to monitor low level gypsy moth populations and to help us determine when more intensive survey methods should be employed. Male moth catches have increased significantly at all five sites (Berlin Lake, Michael J. Kirwan Dam, Mosquito Creek Lake, Stonewall Jackson Dam and Tygart Lake) this past season.

Michael J. Kirwan Dam personnel deployed burlap banding at all trap locations and found four gypsy moth larvae and one pupae at trap location #3. Tygart Lake conducted an egg mass survey (five-minute walks) and found one gypsy moth egg mass at trap locations #5 and #11. Berlin Lake and Stonewall Jackson Dam personnel found zero egg masses.

We would like to continue the trapping program at the same intensity at Stonewall Jackson Dam in 1994. The remaining sites have high trap averages (exceeding 150 moths per trap) and Corps personnel are annually conducting egg mass surveys and/or deploying burlap banding. If Corps personnel continue to conduct these more intensive surveys, then trapping at these sites is not necessary for our purposes. However, we will continue to support those resource managers that wish to continue trapping at their site.

Thank you for your continued cooperation and if you have any questions regarding these results, please call me at (304) 285-1556.

Sincerely,

Karen D. Felton
